B. 3. railroad track, Northeast

C. 1. urbanization

C. 2. middle, working

C. 3. child, women

C. 4. socialism, production

Summary and Reflection

A complete answer should include: the shift from an agricultural economy to one based on manufacturing; such changes as population growth, urbanization, improved transportation, new industries, inventions, and social classes; many people worked shifts in factories, where wretched conditions led to calls for reform; women began staying at home more, with men earning most of the income.
